

SERVICES AND SOLUTIONS

Alacra helps find, organize and present the critical business information required to execute transactions, manage client engagements, perform due diligence and research business opportunities.

ALACRA CONCORDANCE

Alacra Concordance aids organizations in gaining a unified view of customer, prospect and counterparty information through the process of Entity Identifier Mapping. By mapping business entities within customer databases to external identifiers, Alacra Concordance provides organizations with a centralized set of reference data upon which it can layer an application for risk management, regulatory compliance, CRM and marketing.

Uncover the true power behind Alacra Concordance with our Concordance Intelligence Application (CIA).

Alacra's CIA application provides clients with a lens into our Concordance database and its attributes. For prospects, CIA sits on top of the Alacra universe of entities and

securities. For clients, CIA sits on top of their universe and offers a real time view into cleansed entity and security records. This tool enables Alacra Concordance data to be viewed from many angles. Data elements include; name, entity type or subtype, industry classification, geographic location, public/private, primary exchange, security types, and publisher coverage.

CIA at Work

In addition to generating a list of entities based on the desired criteria, CIA allows you to drill down into a specific entity or security and generate a snapshot. This is a single view which displays; legal name and address, industry classification (Alacra, SIC, NAICS, GICs), subsidiaries, securities, public identifiers (ticker, ISIN, SEDOL, etc.), proprietary identifiers (Moody's KMV, S&P ID, etc.), and ultimate parent. Client reference data and identifiers can also be included on the snapshots.

alacra concordance

KEY FEATURES AND BENEFITS

- Allows potential clients to view the capabilities of Alacra Concordance in seconds.
- Users can gain a better understanding of clients and counterparties by utilizing detailed tagging of entities and securities.
- Quickly validate Concordance mapping between multiple client data silos as well as public and proprietary identifiers.
- Verify data accuracy by instantly producing entity and security snapshots.
- View all exchange traded securities issued by an entity to better understand entity-security relationships.
- Export lists and corporate hierarchies to Excel to allow for manipulation and more detailed analysis of data.
